

DATASHEET

Meet Fortra®

Unlimited threats to your security. One platform for peace of mind.

Security teams don't care about tools; they're looking for business results — and so are we. Every day, Fortra® is finding cyber threats and mitigating them. We call these protected outcomes, and they are one of the ways that Fortra is creating a stronger, simpler future for cybersecurity. So, how do we do it?

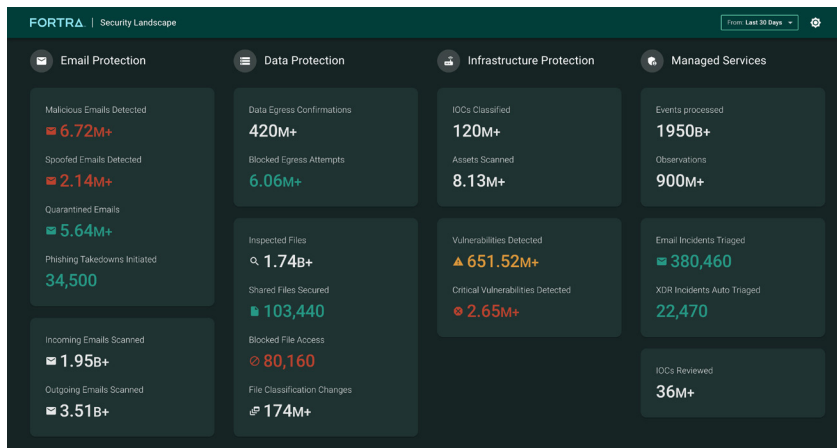

Cloud-Native, Multi-Vector Cyber Defense

Fortra's extensive arsenal of advanced capabilities will be brought together in our seamless, solution-based platform. We want to anticipate attacks, secure your organization, and create resiliency. It takes technology to address the known, threat intelligence to predict the unknown, and automation to cover any gaps. Our cloud-native, multi-vector cyber defense platform will allow you to:

- **Aggregate:** Get advanced correlation across your data, regardless of the source
- **Correlate:** Experience the synergy of a suite of products designed to work together
- **Simplify:** Reduce administration and create more time to deliver security outcomes
- **Unify:** Respond more effectively with a centralized, big-picture perspective

Protected Outcomes

Fortra's platform is smart and simple. It detects attacks from many threat sources, aggregates telemetry data, and correlates it using artificial intelligence (AI) to surface indicators of compromise with speed and precision. This helps customers mitigate material risk, leading to a more resilient and secure organization.

Security Landscape dashboard found within the Fortra platform

SUMMARY

Fortra (Platform)

- Detect threats using Fortra's unified data model
- Aggregate and correlate intelligence in Fortra Threat Brain
- Mitigate risks with Fortra solutions
- Simplify administration with Fortra's single agent
- Unify intelligence in a single user interface

Protected Outcomes

- Malicious emails detected
- Spoofed emails detected
- Quarantined emails
- Phishing takedowns initiated
- Incoming emails scanned
- Outgoing emails scanned
- Data egress confirmations
- Blocked egress attempts
- Inspected files
- Shared files secured
- Blocked file access
- File classification changes
- IOCs classified
- Assets scanned
- Vulnerabilities detected
- Critical vulnerabilities detected
- Email incidents triaged
- XDR incidents auto triaged
- IOCs reviewed

The security landscape dashboard found within the Fortra platform reflects representative information available on a typical day or month for the activities Fortra performs for its customers. Fortra has processed millions of entities with multiple observation points and billions of queries, generating original intelligence that goes beyond the paid feeds thanks to internal product details known only to Fortra, entities discovered by Fortra's algorithms and threat hunters, and new vulnerabilities discovered by Fortra's security team.

AI-Powered Cyber Kill Chain Prevention

Fortra Threat Brain is the central point within our platform that ingests and normalizes IOCs from Fortra products and makes the refined threat intelligence available back to them. It also incorporates insights from our own world-class team of security researchers and collaboration partners – including global law enforcement agencies, ISACs, private sector organizations, and more.

Featured Fortra Technologies

Fortra solutions are designed to integrate with the platform and existing tech ecosystems, whether that's on-premises, SaaS, managed services, or a mix. The breadth of Fortra solutions and deployment models provides the flexibility to improve cyber maturity, and our collective intelligence across solutions delivers a comprehensive view of the cyber risk landscape.

- **Fortra Cloud Email Protection** – Advanced threat protection from an integrated cloud email security platform
- **Fortra Vulnerability Management** – Proactive, accurate, and easy-to-use SaaS vulnerability management
- **Fortra Extended Detection and Response** – Comprehensive visibility and coverage across endpoints, network, and hybrid environments
